

# Patches, Mods etc.

A game mod or game modification changes or adds new capabilities to games at Voobly. Voobly's mod support makes it much easier to play mods online.

Support for mods is divided into four high level categories:

- **Game Play Changes** - This type of mod changes around the game rules and because of this all users in the game room need to have these types of mods installed when it's played (or the game would go out of sync). This type of mod is also known as a data mod.
- **New Visuals or Content** - This type of mod changes around the graphics files or adds new maps and doesn't require everyone in the game room to have it installed. This type of mod is also known as a local mod.
- **Patches** - News updates to the game.
- **Themes** - Custom themes from our users to add a better experience on our client.
